

READ THIS FIRST

!!! IMPORTANT !!!

You must run the “**pod install**” command first before opening the “**.xcworkspace**” file with Xcode.

- 1) **Right-Click on the project folder** (located at the same location where this PDF file is. *NOT the Documentation folder*)
- 2) **Select ‘New Terminal at Folder’** (if you don’t see this option, it may be under Services -> New Terminal at Folder)
- 3) **After the Terminal window opened, type “pod install” then hit Enter** (wait until everything is complete)
- 4) **Now you can open the “.xcworkspace” file in Xcode**
